Glue Jet Application

Applying adhesives is the job of adhesive application valves and in the TOPGUARD system the GJA (Glue Jet Application) module takes over their programming and control.

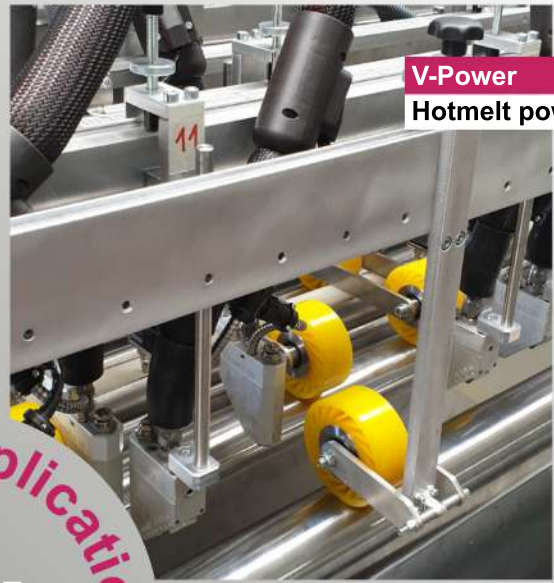

Clarity and ease of use have been combined with universality and maximum performance. The GJA module is freely configurable and can, for example, be easily adapted to a wide variety of application valve types (electric, pneumatic, electro-pneumatic). The different valve types are visually displayed to the user and the type of power supply is preconfigured using system parameters.

Programming and saving adhesive applications is very easy thanks to the touch screen and the total number of jobs that can be saved is unlimited or limited only by the storage space on the hard disk. Macro functions enable parallel programming in a very simple way.
